

The Most Advanced Treatment for Wrinkles

The Palomar® 1540 Non-Ablative Resurfacing Laser.

Traditional laser resurfacing, although very effective, requires extensive recovery time, the introduction of Palomar 1540 laser has revolutionised the downtime involved in the treatment of wrinkles and scarring.

Now with very little recovery time, together with a marked improvement in the results, Palomar 1540 is the most advanced solution available.

Berkeley Clinic has waited a long time before introducing this type of technology. After extensive research and testing we believe that the Palomar 1540 is the best laser currently available.

This laser device has simply changed the way wrinkles, uneven skin, stretch marks and acne scars are treated. The laughter lines and under eye area responds remarkably well to this laser with significant reduction in wrinkling and tightening of the skin. All forms of scars including acne and surgical marks show very substantial improvements.

New Look for Agera® Rx Prescription Professional Skin care

If you have been using the Agera® Rx range of products you will notice the products and packaging have had a revamp, in a move to give the brand a more contemporary 'feel' and image. Although the product exteriors have a new design, the scientific content and powerful ingredients of this range remain the same or where new advancements have happened, products have been developed and improved.

As one of the leading medical brands on the market, Agera® Rx is exclusively available from medical aesthetic clinics whereby medically trained doctors will advise individual clients of the most suitable and effective care programme for their skin. If you have not tried the Agera® Rx from The Berkeley Clinic, ask us for a recommendation on the best products for you during your next visit.
